

ABSTRACT

Nebulising apparatus (1) for aerosol therapy comprising a nebuliser ampoule (2) provided with at least an opening (4;5) for aspirating and/or expelling air from/to the environment and with a mouthpiece (3) for dispensing a nebulised medical product. The apparatus is provided with a valve (6) for regulating a flow of air into and/or out of the ampoule (2) and it comprises: a shutter (8) able to move between an operative configuration corresponding to an obstruction of said opening (4;5) and an operative configuration of consent to the passage of the flow of air; a ring (9) connected to the shutter (8) to anchor it to a tubular portion (2a) of the ampoule (2); a plurality of deformable connecting elements (10) between the ring (9) and the shutter (8) to allow the shutter (8) to move between the aforesaid operative configurations.
